The shape of ecological thinking

The industrial design firm dottings creates designs for products, lights and public spaces, as well as provides consultation on visual appearance for companies.

Their design is by no means mannered luxury or a vain infatuation with form. Instead, dottings uses the simplest and clearest approach to offer clients intelligent, honest designs. The style of Podreka and Radanitsch is by a composed, relaxed elegance and focuses on sustainability and responsible production.

"Clients rely on dottings for real solutions: "Clever product design must do more than just look good. We apply the concept of 'industrial design' to allow us to move into new areas not covered by product design but that are well-suited to it. We develop products from concept to production stage."

Established in 2006, the dottings team is made up of Sofia Podreka and Katrin Radanitsch and their network of freelancers and specialists. Sofia Podreka and Katrin Radanitsch both received diplomas with distinction in industrial design from the University for Applied Arts in Vienna and studied at the Denmark Design School in Copenhagen. They have successfully participated in several competitions and exhibitions.
